Claim 2; Fig 1; 58pp; English.

DNA encoding the water-soluble polypeptide with a high affinity for IFN alpha and beta is isolated by PCR, using appropriate oligonucleotides as primers and cloned cDNA as template. For example, bacteriophage lambda ZAP, containing the entire coding sequence of the IFN alpha and beta receptor (030533), was incubated with oligos 030534 and 030535. R28496 represents the complete receptor. R28495 lacks the transmembrane and cytoplasmic domains. Both forms bind IFN in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the
N-PSDB; Q86457.

Compsn. of monoclonal antibodies against interferon useful as immuno:modulator, eg. for treating AIDS Disclosure; Fig.28-2B; 105pp; English.

                                                                                                                                                          New human alpha-interferon receptor protein - useful for testin interferon agonists and in treatment or diagnosis
Disclosure; fig 4, 30pp; French.
This recombinant human alpha interferon (IFN) receptor protein useful for the testing of IFN agonists and for treatment and discousis of viral diseases and tumours. Antibodies raised against this protein can be used for blocking the receptor when require eg where overexpression of alpha-IFN is harmful. The Abs are also useful for eg drug targetting. Variants of the protein, having residue 164 (Thr) replaced by Arg and an Asp inserted between residues 479 and 480, are also useful.
                                                                                                                                                                                                                                                                                                                02-MAY-1991.

The invention covers derivatives of the interferon-alpha and/or beta receptor obtained by deleting the transmembrane and cytoplasmic domains of the native receptor or by substitution. Potentially immunogenic epitopes are eliminated and the deriv. can be secreted from transformed cells. Soluble deriv. s block the activity of IFN alpha/beta and can be used to treat autoimmune diseases or to inhibit graft rejection. See also Q14239.
R28496;
31-MAR-1993 (first entry)
Sequence of a soulble form of the interferon (IFN) receptor with a high affinity for IFN-alpha and -beta.
Interferon receptor; alpha-interferon; beta-interferon.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             16-JAN-1992 (first entry)
Complete interferon-alpha/beta
IFN; autoimmune disease; graft
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    domain

Mater soluble polypeptide(s) strongly bind interferon(s) alpha pr and beta - useful as immunosuppressants, for treating auto:immune pr and beta - useful as immunosuppressants, for treating auto:immune pr diseases and transplant rejection soluble polypeptide with a high affinity for Claim 3; Fig 2; 58pp; English.

CLAIM 3; Fig 2; 58pp; English.

CLAIM encoding the water-soluble polypeptide with a high affinity for CLAIM and obeta is isolated by PCR, using appropriate coligonucleotides as primers and cloned cDNA as template. For example, bacterlophage lambda ZAP, containing the entire coding sequence of the IFN-alpha and -beta receptor (Q30533), was incubated with oligos CLAIM and Q30535. R28496 represents the complete receptor. R28495 clacks the transmembrane and cytoplasmic domains. Both forms bind CLAIM in the same way as antibodies so are immunosuppressants e.g. for treating autoimmune diseases and graft rejection. They lack the CLAIM is side-effects of known immunosuppressants such as steroids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Query Match

Monoclonal antibodies produced against soluble forms of the human interferon alpha-beta receptor based on the full-length human IFN-R sequence are claimed. The antibodies are useful for treatment and prophylaxis of disorders involving cell proliferation and/or viral infection.
                                                                                                                                                                                                                                                                                                                                                       Compsn. of monoclonal antibodies against interferon receptor useful as immuno:modulator, eg. for treating AIDS Disclosure; Fig.3A-2B; 105pp; English.
The amino acid sequence of human interferon class I receptor is given in R75356. A recombinant soluble form of the extracellular domain of this receptor (R71723) has been used to raise immunomodulatory monoclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (EUBI-) LAB EURO BIOTECHNOLOGIE

                                                                                                                                                                                                                                                                     IFNAR (W21804). There is no transmembrane domain. The amino acid sequence is predicted from a cDNA clone (see also T73520) obtd. from human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 and 2 (see also W21805) probably regulate the response of human cells to IFNA, either by acting as IFN antagonists or by regulating the activity of the multiple IFN subtypes. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, tissues and organisms, or for diagnostic purposes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel splice deleted interferon alpha-receptor (IFNAR) form 2 (W21806) is characterised by a double deletion when compared to transmembranal IFNAR (W21804). The extracellular domain is shortened by 6 amino acid residues and is followed by a truncated intracellular domain. There is no transmembrane region. The amino acid sequence is predicted from a cDNA clone (see also T73521) obtd. If from human myeloma U266 cells. Soluble, non-membrane bound IFNAR splice-deleted forms 1 (see also W21805) and 2 may regulate the response of human cells to IFNS, either by acting as IFN antagonists or by regulating IFN activities. They can be expressed in host cells and used to inhibit, modulate or modify the activities of IFNs alpha and beta in cells, tissues and organisms, or Sequence 496 AA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Ma

Human transmembranal interferon alpha receptor (IFNAR) (W21804) includes a 21-amino acid transmembrane region. Novel, splice-deleted IFNAR forms 1 (W21805) and 2 (W21805) have been detected that lack this transmembrane denain. These, soluble non-membrane bound polypeptides can be expressed in host cells and used to inhibit, modulate or modify the activities of interferons alpha and beta in cells, tissues and organisms, or for diagnostic
rejection

Claim 2; Page -; 79pp; English.

This sequence is the human CRFB4 sequence, DNA encoding it is used in the recombinant DNA (I) of the invention. (I) comprises a sequence (S1) encoding the interleukin-10 (IL-10) receptor (IL10R) and a sequence (S2)

CC cells containing (I) may be used to identify agonists/antagonist of CC II-10. Agonists are potentially useful, e.g. for preventing allograft CC rejection, as vaccine adjuvants, for treatment of photosensitivity.
CC inflammation, autoimmune disease and septic shock, while antagonists are potentially useful for increasing immune responses against tumours, corruses, bacteria and parasites (especially intracellular pathogens) and CC for preventing organ rejection. A vector containing (I) is used to crestore, e.g. by gene therapy, II-10 sensitivity to a cell that expresses a dysfunctional IIIOR and is able to bind II-10 but not to transduce a csignal. Antisense CRFB4 sequences (especially ribozymes), can inhibit CL-10 activity in cells. Antibodies specific for CRFB4 are used to CC measure and localise CREP4, for diagnosts of defective II-10 activity. CC Fragments of (I) are used as primers or probes to assay CREP4-specific CC RNA. Agonists/antagonists may be administered parenterally, orally or crectally especially by intravenous injection or directly into a tumour or allocative interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Suppressing tumours in mammals with accessory factor 1 (AF-1) for interferon gamma, specifically induction of class I HLA antigens, including use of AF-1:DNA in gene therapy Disclosure; Fig 21A; 114pp; English.

The sequence is that of human interferon-gamma accessory factor-1. Incorporation of AF-1 into immune and tumour cells re-establishes normal function with elimination of malignant cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          R71035;
11-OCT 1995 (first entry)
Human IFN-gamma accessory factor-1.
Interferon-gamma; AF-1; tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Homo sapiens.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
